### SUMMARY

<b>Eligible Mitigation Action Type</b>	<input checked="" type="checkbox"/> Appendix D-2 item (specify): <u>Item 1: Class 8 Local Freight Trucks and Port Drayage Trucks (Eligible Large Trucks)</u> <input type="checkbox"/> Item 10 - DERA Option (5.2.12) (specify and attach DERA Proposal):
<b>Explanation of how funding request fits into Beneficiary's Mitigation Plan (5.2.1):</b>	Missouri's BMP allocates \$6 million to government truck repowers and replacements, which includes eligible mitigation action (EMA) categories 1 and 6. This funding request will fund large government truck projects under EMA category 1 throughout the state. The project will reduce NO <sub>x</sub> emissions and support government fleet upgrades, which are both specific goals listed in Missouri's BMP.
<b>Detailed Description of Mitigation Action Item Including Community and Air Quality Benefits (5.2.2):</b>	Large truck repowers and replacements reduce NO <sub>x</sub> emissions and have a co-benefit of reducing particulate matter. This project will reduce local diesel emissions exposure, while also decreasing regionally transported NO <sub>x</sub> pollution that contributes to the formation of ground-level ozone pollution. Supporting publicly owned fleets will also directly benefit the communities involved through decreased operating and maintenance costs and increased fleet reliability.
<b>Estimate of Anticipated NO<sub>x</sub> Reductions (5.2.3):</b>	Per Missouri's BMP, the department estimates that the \$6 million dedicated to government truck projects will achieve an estimated 125-175 tons of lifetime NO <sub>x</sub> emission reductions. This funding request represents approximately 38 percent of the total funding Missouri has dedicated to government trucks. Based on this percentage, the projects funded through this funding request will achieve an estimated 47-67 tons of lifetime NO <sub>x</sub> emission reductions. The department will calculate the emission reductions from each individual project implemented based on the characteristics of the actual trucks replaced and include the calculated emission reductions in the semi-annual reports the department will submit to the trustee.
<b>Identification of Governmental Entity Responsible for Reviewing and Auditing Expenditures of Eligible Mitigation Action Funds to Ensure Compliance with Applicable Law (5.2.7.1):</b>	Missouri Department of Natural Resources
<b>Describe how the Beneficiary will make documentation publicly available (5.2.7.2).</b>	The Missouri Department of Natural Resources, as lead agency for the state of Missouri implementing the Environmental Mitigation Plan, has established a webpage on the VW Trust and mitigation actions, <a href="https://dnr.mo.gov/env/apcp/vw">https://dnr.mo.gov/env/apcp/vw</a> .
<b>Describe any cost share requirement to be placed on each NO<sub>x</sub> source proposed to be mitigated (5.2.8).</b>	For most projects that receive funds through this funding request, the minimum cost share to be covered by the fleet owners will be fifty percent of the actual cost of the mitigation action. However, some fleet owners may cover more than this minimum amount, and some projects may receive funds to cover up to 100 percent of the cost of the mitigation action.
<b>Describe how the Beneficiary complied with subparagraph 4.2.8, related to notice to U.S. Government Agencies (5.2.9).</b>	On February 28, 2018, the Department notified the Department of Interior, including the National Park Service and U.S. Fish and Wildlife Service, and the Department of Agriculture, including the Forest Service of the availability of VW funds for locations within Missouri. The Department did not receive notice from any other federal agency indicating interest in these funds.
<b>If applicable, describe how the mitigation action will mitigate the impacts of NO<sub>x</sub> emissions on communities that have historically borne a disproportionate share of the adverse impacts of such emissions (5.2.10).</b>	Trucks operate in areas with disproportionately higher concentrations of diesel emissions such as truck depots, construction sites, and highways. These types of areas bear a disproportionate share of the air pollution burden from mobile emission sources, and these projects will help reduce emissions in these areas with higher concentrations of diesel emissions.

The department reviewed invoices for class 8 trucks that fleets have applied for in recent funding programs the department administered. Trucks are classified by their gross vehicle weight rating. The type of fuel that powers the engine affects the price of the truck. Special equipment and the intended use for trucks also affect the price (lifts, hydraulics, pumps, plows, dump beds, etc.)
