#### **SUMMARY ATTACHMENT**

#### Explanation of how funding request fits into Beneficiary's Mitigation Plan (5.2.1):

The primary goal of the State of Delaware's Volkswagen Environmental Mitigation plan is to improve and protect ambient air quality by implementing eligible mitigation projects that will achieve significant and sustained reductions in NOx emission exposures in areas with poor air quality; areas with historical air quality issues; and areas that receive a disproportionate quantity of air pollution from diesel. The Delaware Department of Natural Resources and Environmental Control (DNREC) is partnering with the Waste Management of Delaware, Inc. (WM) to scrap and replace 10 older diesel solid waste trucks as compressed natural gas units CNG). A total of 6 solid waste trucks will be replaced through the FY2019 Clean Diesel Program and an additional 4 solid waste trucks will be replaced as an Appendix-D-2 item under the Volkswagen Environmental Mitigation Plan.

The Delaware CNG Vehicle Deployment Project will serve as an important model for additional heavy- duty trucking companies not only to evaluate cost-effective and clean-burning natural gas vehicles in WM's fleet, but also to serve as an example for how to successfully implement advanced technology alternative fuel programs in large commercial and residential waste collection programs.

WM is pursuing an aggressive program to deploy CNG vehicles in Delaware, similar to the approach it has taken throughout the country in states including Pennsylvania, Colorado, and California. The project will serve as a method for WM to reduce vehicle emissions and improve air quality in New Castle and Sussex Counties, perfectly in alignment with the mission of WM and of the goals of DNREC's VW Beneficiary Mitigation Plan.

The FY2019 DERA workplan and the Delaware's Volkswagen Environmental Mitigation Plan are attached to further support this funding request.

## Detailed Description of Mitigation Action Item Including Community and Air Quality Benefits (5.2.2):

The Delaware Department of Natural Resources and Environmental Control (DNREC) is partnering with the Waste Management of Delaware, Inc. (WM) to scrap and replace 10 older diesel solid waste trucks. A total of 6 solid waste trucks will be replaced through the FY2019 Clean Diesel Emission Reduction Act grant (DERA) Program with Volkswagen Mitigation Funds as the cost share and an additional 4 large trucks will be replaced as an Appendix-D-2 item under the Volkswagen Environmental Mitigation Plan (Phase 2). The solid waste trucks will operate in both non-attainment areas of the state. The replacement trucks will be fueled by compressed natural gas under the following replacement schedule:

| Program                                 | Compressed Natural Gas |
|---|------------------------|
| FY2019 DERA Grant                       | 6                      |
| Appendix D-2 Eligible Mitigation Action | 4                      |
| Replacement (Phase 2)                   | 4                      |
| Total                                   | 10                     |

### Detailed Description of Mitigation Action Item Including Community and Air Quality Benefits (5.2.2): (continued)

This project will have a tremendous positive impact on air quality for nonattainment areas in Delaware. Waste Management's (WM) vehicles will primarily operate in New Castle and Sussex Counties, which were both designated as 8-Hour Ozone nonattainment areas. The CNG technology proposed by WM represents a viable opportunity to significantly improve air quality, particularly with fleet vehicles that often run on diesel. The deployment of these CNG vehicles will replace the operation of diesel vehicles in WM's fleet, resulting in improved air quality in communities disproportionately affected by air pollution and more susceptible to health risks associated with diesel emissions.

The lifetime emission reductions are (in short tons) for the 10 replacements under the FY2019 Diesel Emission Reduction grant and the Appendix D-2 Volkswagen Environmental Mitigation Plan:

NOx - 16.5352

PM2.5 - 0.8259

HC - 0.7675

CO - 3.8254

#### Describe How the Beneficiary will Make Documentation Publicly Available (5.2.7.2)

Subparagraph 5.2.7.2 of the Environmental Mitigation Trust Agreement for State Beneficiaries requires that Beneficiaries include in their funding requests:

A commitment by the Beneficiary to maintain and make publicly available all documentation submitted in support of the funding request and all records supporting all expenditures of Eligible Mitigation Action funds, subject to applicable laws governing the publication of confidential business information and personally identifiable information, together with an explanation of the procedures by which the Beneficiary shall make such documentation publicly available;

The Department of Natural Resources and Environmental Control (DNREC) in the State of Delaware is committed to maintaining and making publicly available all documentation submitted support of the funding requests and all records supporting all expenditures of Eligible Mitigation Action funds. .

The public will be able to view funding requests on the DNREC website. DNREC will maintain these records on the Volkswagen (VW) Environmental Mitigation Trust Fund specific webpage. The webpage is designed to support public access and limit burden for the general public. The webpage can currently be found at <a href="https://dnrec.alpha.delaware.gov/air/mobile-sources/vw-mitigation-plan/">https://dnrec.alpha.delaware.gov/air/mobile-sources/vw-mitigation-plan/</a>.

DNREC has also created an electronic listserv. The Listserv is open to the public, used to communicate news, events, and information related the Environmental Mitigation Trust Fund. The listserv is advertised through the website and at public events related to the Volkswagen Environmental Mitigation Fund.

### Describe How the Beneficiary complied with subparagraph 4.2.8, related to notice to U.S. Government Agencies (5.2.9)

The Delaware Department of Natural Resources and Environmental Control sent emails to the representatives from the U.S. Department of the Interior and the U.S. Department of Agriculture listed in subparagraph 4.2.8 of the State Trust Agreement on February 19, 2018.

If applicable, describe how the mitigation action will mitigate the impacts of NOx emissions on communities that have historically borne a disproportionate share of the adverse impacts of such emissions (5.2.10).

The State of Delaware has been designated by the U.S. Environmental Protection Agency (EPA) as non-attainment for ozone (2008 and 2015 standards) in New Castle County and Sussex (2008 standards). Delaware's New Castle County has also been re-designated as attaining the fine particulate matter standard for both 1997 and 2006. New Castle County has a 10-yr maintenance plan in place.

The Department has recommended that FY2019 Diesel Emission Reduction Act (DERA) funds and Volkswagen Environmental Mitigation Funds under Phase 2 be used to replace large local trucks with cleaner vehicles. DNREC's 2014 Emissions Inventory has concluded that up to 72% of in-state NOx emissions can be attributed to the transportation sector. Delaware's emissions from heavy and medium duty vehicles (which include solid waste trucks) are becoming an increasingly larger source of overall mobile source emissions for nitrogen oxides (NOx).

Natural gas is a clean-burning alternative that reduces substantial smog-forming and cancer-causing emissions. On an annual basis, each vehicle purchased as a part of this project is expected to use a total of 8,500 Diesel Gallon Equivalents (DGE) of CNG. Annually, all ten vehicles combined are expected to displace 85,000 DGE of CNG total annually.

Lastly, replacing refuse trucks with trucks that operate on cleaner burning fuel (compressed natural gas) will assist the Department in reducing emissions in Delaware's environmental justice areas. Environmental Justice is the act of equity among all races, ethnicities, income, and social classes of people and includes any census tract with a poverty level of 20% or higher and where 30% or more are considered minorities.

The Department's mission relative to environmental justice ensures that no particular area receives disproportionate environmental impacts due to air pollution.

If applicable, describe how the mitigation action will mitigate the impacts of NOx emissions on communities that have historically borne a disproportionate share of the adverse impacts of such emissions (5.2.10).

### **CERTIFICATIONS**

By submitting this application, the Lead Agency makes the following certifications:

- 1. This application is submitted on behalf of Beneficiary Delaware and the person executing this certification has authority to make this certification on behalf of the Lead Agency and Beneficiary, pursuant to the Certification for Beneficiary Status filed with the Court.
- 2. Beneficiary requests and directs that the Trustee make the payments described in this application and Attachment A to this Form.
- 3. This application contains all information and certifications required by Paragraph 5.2 of the Trust Agreement, and the Trustee may rely on this application, Attachment A, and related certifications in making disbursements of trust funds for the aforementioned Project ID.
- 4. Any vendors were or will be selected in accordance with a jurisdiction's public contracting law as applicable. (5.2.5)
- 5. Beneficiary will maintain and make publicly available all documentation submitted in

support of this funding request and all records supporting all expenditures of eligible mitigation action funds subject to applicable laws governing the publication of confidential business information and personally identifiable information. (5.2.7.2)

#### **ATTACHMENT C**

#### Detailed Plan for Reporting On Eligible Mitigation Action Implementation

The Delaware Department of Natural Resources and Environmental Control (DNREC) will provide detailed reporting on Volkswagen Phase 2 CNG Deployment Project and the Category 10 – FY2018 DERA grant option for large truck replacements in the following ways:

- Timely updates to DNREC Volkswagen (VW) Environmental Mitigation Plan webpage;
- Delaware's semiannual reporting obligations to Wilmington Trust (the "Trustee"); and
- Quarterly reports submitted to the Environmental Protection Agency (EPA).

DNREC maintains a Volkswagen (VW) Environmental Mitigation specific webpage that has been designed to support public access and limit burden for the general public. DNREC's VW specific webpage can be found at <a href="https://dnrec.alpha.delaware.gov/air/mobile-sources/vw-mitigation-plan/">https://dnrec.alpha.delaware.gov/air/mobile-sources/vw-mitigation-plan/</a>. Timely updates to the webpage will inform the general public on the each project's status.

DNREC shall, in the next semiannual report following the Trustee's approval of this project, describe the progress implementing this Eligible Mitigation Action that will include a summary of all costs expended on the Eligible Mitigation Action through the reporting date per 5.3 of the Environmental Mitigation Trust Agreement for State Beneficiaries. The report will also include a complete description of the status, development, implementation (including project schedule and milestone updates), and any modification to this Eligible Mitigation Action.

Finally, one of the requirements of the FY 2019 Diesel Emission Reduction Act (DERA) State Clean Diesel Grant Program is the timely submission of quarterly reports to the EPA. DNREC will submit timely reports to the EPA. They will also be included in the semiannual reports that DNREC provides to the Trustee.

### **ATTACHMENT D**

### <u>Detailed Cost Estimates From Selected or Potential Vendors For Each Proposed</u> <u>Expenditure Exceeding \$25.000.</u>

The Delaware Department of Natural Resources and Environmental Control (DNREC) has provided a detailed cost estimate from the application received in response to NAT190001-VWEMTFP for Waste Management of Delaware, Inc. – CNG Deployment Project. The budget and application are both included.

Waste Management of Delaware, Inc. (WM) retired some of their vehicles originally listed in the application with DNREC. On November 27, 2019, Waste Management of Delaware of Delaware supplied a list of alternative equipment for replacement. The Department accepted this list of equipment as the model year and emissions did not change. The replacement letter is also attached.

**RE**: Request to Provide Replacement Units for Seven (7) of the Units Included in WM's 2019 VW Application

Dear Ms. Cuccinello:

Waste Management of Delaware, Inc. (WM) appreacites the Delaware Department of Natural Resources and Environmental Control (DNREC) for allowing WM to replace seven (7) of the units originally included in its VW application to RFP Contract No. NAT19001-VWEMTFP for the Volkswagen Environmental Mitigation Trust Fund Project Solicitation. The replacements are the same type, fuel type, and year of the original units, and there will be no impact on the estimated emission reductions or amount of diesel fuel displaced. Please see the table below for more information, and the registrations for the replacemens are also included with this submission.

| Original Unit | Year | Status | Replacement Unit | Year | Status |
|---------------|------|--------|------------------|------|--------|
| 208230        | 2005 | Sold   | 309444           | 2005 | Active |
| 208456        | 2006 | Sold   | 208431           | 2006 | Active |
| 209245        | 2007 | Sold   | 411811           | 2007 | Active |
| 209617        | 2009 | Sold   | 209702           | 2009 | Active |
| 411528        | 2006 | Moved  | 264524           | 2006 | Active |
| 411636        | 2006 | Sold   | 411642           | 2006 | Active |
| 412285        | 2007 | Sold   | 411641           | 2007 | Active |

WM is strongly committed to improving the air quality and quality of life for all communities in which we work and live, and as such we look forward to partnering with the State of Delaware on this exciting project. Should you have any questions or concerns regarding our company, sustainability policies, or commitment toward this project, please do not hesitate to contct me using the information below.

Sincerely,

Jim Pryor

RE: Response to the Delaware Department of Natural Resources and Environmental Control Volkswagen Environmental Mitigation Trust Fund Project Solicitation

Dear Ms. Cuccinello:

Waste Management of Delaware, Inc. (WM) is pleased to submit the enclosed application in response to RFP Contract No. NAT19001-VWEMTFP for the Delaware Department of Natural Resources and Environmental Control (DNREC) Volkswagen Environmental Mitigation Trust Fund Project Solicitation.

Waste Management of Delaware, Inc.'s parent company, Waste Management, Inc., is the largest provider of environmental services in North America. Since 1968, WM has supplied residential, commercial, industrial, and municipal customers with solid waste collection and disposal services. WM currently operates over 130 compressed natural gas (CNG) stations and maintains a fleet of more than 7,250 CNG vehicles. In addition to WM's unparalleled success in the alternative fuels space, it also has extensive experience implementing federal, state, and local grant contracts. WM will leverage its history of successful CNG deployments to complete the proposed project.

WM's proposed projects seeks to scrap and replace ten engine MY 1992-2009 diesel onroad solid waste collection vehicles (SWCV) with ten near-zero-emission CNG SWCVs. The funding request per unit is reasonable and well below 25% of the total vehicle cost at \$50,000. The total funding request for all ten vehicles is \$500,000. WM is committed to providing the remaining funds to cover the balance of the CNG vehicles. Within one year of contract execution, WM will deploy the new vehicles in Wilmington and Laurel and operate them in its local refuse collection and recycling routes throughout each location. Once complete, the project will directly suport the DNREC's goals to improve air quality by voluntarily displacing diesel consumption and to reduce emissions using a domestically produced fuel.

This project is a critical step for WM to provide alternative fueled solutions to its customer base throughout Delaware. The replacements will serve as an example for how to successfully implement advanced technology alternative fuel programs and provide a validated model for other fleets considering the transition from highly-emitting diesel to clean-burning alternative fuels.

WM is strongly committed to improving the air quality and quality of life for all communities in which we work and live, and as such we look forward to partnering with the State of Delaware on this exciting project. Should you have any questions or concerns regarding our company, sustainability policies, or commitment toward this project, please do not hesitate to contact me using the information below.

Sincerely,

Jim Pryor

# Department of Natural Resources and Environmental Control Volkswagen Environmental Mitigation Trust Fund Project

Response to RFP Contract No. NAT19001-VWEMTFP

### **Attachment 4**

# **Company Profile and Capabilities**

### STATE OF DELAWARE Department of Natural Resources and Environmental Control

Attachment 4

Contract No.: NAT19001-VWEMTFP
Contract Title: Volkswagen Environmental Mitigation Trust Fund Project

### **COMPANY PROFILE & CAPABILITIES FORM**

Suppliers are required to provide a reply to each question listed below. Your replies will aid the evaluation committee as part of the overall qualitative evaluation criteria of this Request for Proposal. Your responses should contain sufficient information about your company so evaluators have a clear understanding of your company's background and capabilities. Failure to respond to any of these questions may result in your proposal to be rejected as non-responsive.

### Briefly describe how your Volkswagen Environmental Mitigation Trust Fund Project benefits the State of Delaware

Waste Management of Delaware, Inc.'s (WM) Compressed Natural Gas (CNG) Vehicle Deployment Project is precisely the low-emission strategy that will provide the state of Delaware with a technologically simple approach for near-term, cost-effective benefits. WM has the experience and resources to complete the project within the expected timeframe of one year and looks forward to the possibility of replicating the project to grow its fleet of CNG solid waste collection vehicles in Delaware. To summarize, WM's project will benefit the State in the following ways:

- Criteria Pollutant and GHG Emission Reduction WM will operate ten heavy-duty near-zero-emission CNG vehicles as a result of this project. Based on 8,500 DGE of fuel used per vehicle per year, WM anticipates the project to displace 85,000 DGE of CNG per year for all ten vehicles, which will provide annual emission reductions of 2.5 short tons of NOx, 0.14 short tons of PM, and 946.8 short tons of GHGs.
- Environmental Justice Areas WM's project will provide benefits to two areas, Wilmington and Laurel. The project site in Wilmington falls within the 99%ile on the Demographic Index; it is in the 76%ile for Ozone levels. The Laurel site is not as adversely impacted by Ozone, but it lies in the 58%ile for residents with less than a high school education and in the 46%ile for low income. Further, the geographic location of the project sites in the North and South promotes equitable distribution of the project's benefits.
- NAAQS Compliance WM's new CNG vehicles will replace EMY 1992-2009 diesel trucks, resulting in improved air quality in New Castle (Wilmington) and Sussex Counties (Laurel), which are currently in nonattainment with the 8-hour ozone standard. The project complements efforts to achieve and maintain federal and state ambient air quality standards and to reduce toxic air contaminant emissions. This project is being developed specifically in response to agency demands for improved air quality and a reduction in the transportation industry's dependence on diesel imports.
- Collaboration and Replicability The project team is top notch and has several years of experience working together to complete similar projects. Further, WM is a great advocate for the alternative fuels industry and enjoys sharing lessons learned with other fleets to encourage replicability.
- Project Timeline and Budget The budget has been fully vetted and is cost-effective, and WM's experience will ensure the vendors comply with the proposed schedule.

- Briefly describe how your Volkswagen Environmental Mitigation Trust Fund Project benefits the State of Delaware
  - Economic Development As the natural gas market in Delaware continues to expand, there are a number of Delaware-based companies that will have to increase their own capacities to serve these growing demands.

The use of natural gas reduces the formation of smog, and is especially important in those areas where ground level air quality is poor, such as the communities in which WM's vehicles operate. CNG is the cleanest and most versatile fossil fuel in existence today, offering extremely low emissions of NOx, CO2, and PM. It is also among the most reliable and affordable energy sources available today, due in large part to the huge influx of new natural gas supply that is the result of shale gas formations nearby. CNG offers substantial emission reduction benefits that can help improve air quality and bring the state of Delaware one step closer to meeting emission targets. When combusted, CNG produces up to 90% fewer NOx emissions compared to diesel vehicles and virtually no PM.

2. Briefly describe your company's organization, structure, and philosophy.

Waste Management, Inc. (WM) is the largest provider of environmental services in North America. Since 1968, WM has supplied residential, commercial, industrial, and municipal customers with solid waste collection and disposal services. In addition to its core service offerings, WM is also a leading developer, operator and owner of landfill gas-to-energy facilities. WM was incorporated as a publicly held holding company in 1995, and its shares are traded on the New York Stock Exchange under the symbol "WM." Major shareholders include The Vanguard Group (8.1%), BlackRock, Inc. (7.4%) and William H. Gates III (7.4%). 2018 data is not yet available, but in 2017, WM had revenues of \$14,485 million, and for this project, WM will provide more than the required minimum cost share of 75% from private capital.

As a holding company, WM has over 400 locally-based subsidiaries throughout North America. Many subsidiaries are located along the U.S. Department of Transportation Federal Highway Administration's Alternative Fuel Corridors. Examples of these subsidiaries include Waste Management Atlanta East Hauling in Georgia and Waste Management of Charlotte in North Carolina. Each of WM's subsidiaries focus on distinct geographic areas, where they provide collection, transfer, disposal and recycling and resource recovery services. Across all locations, WM has approximately 42,300 employees, and the vast majority are employed in the United States.

WM is committed to developing sustainable transportation solutions, products, and services in its fleet of solid waste collection vehicles. WM runs the largest fleet of natural gas refuse trucks in North America, supported by more than 130 natural gas fueling stations across 43 states. WM's long-term vision is to use natural gas across all of its operations, and preferably renewable natural gas from its own landfills.

Looking ahead, 90% of WM's entire corporate-wide truck purchases will be natural gas vehicles; an investment surpassing \$1 billion. In 2011, WM deployed its 1000th NGV, making it the largest owner and operator of natural gas solid waste collection trucks in North America, and today WM operates more than 7,250 natural gas vehicles. The deployment of 7,250 clean burning natural gas vehicles is significant not only in magnitude, but, more importantly, it is proof of a deliberate and comprehensive effort to incorporate a cleaner burning vehicle fuel technology into an essential service for the communities and businesses in the Delaware region. By switching to natural gas, WM is reducing dependence on imported petroleum and significantly improving the air quality in areas in which it operates.

 Briefly describe your ability to perform your Volkswagen Environmental Mitigation Trust Fund Project in the allotted time.

WM's Delaware CNG Vehicle Deployment Project is backed by a detailed schedule of tasks, milestones, decision points, and quality control processes, all of which will be overseen by the WM team under the guidance from DNREC. WM will own, operate, and maintain the vehicles throughout and beyond the period of performance.

Based upon the contract dates provided in the solicitation, WM has prepared a schedule of milestones with a project start date in August 2019. WM is fully prepared to move forward upon final execution of the contract documents, and a summary of project milestones, including the expected end dates, is detailed in the chart below.

| Milestone                         | Responsible<br>Party             | Estimated Completion Date  |

# Department of Natural Resources and Environmental Control Volkswagen Environmental Mitigation Trust Fund Project

Response to RFP Contract No. NAT19001-VWEMTFP

### Attachment 6

# **Business References**

### STATE OF DELAWARE Department of Natural Resources and Environmental Control

**Attachment 6** 

Contract No.: NAT19001-VWEMTFP Contract Title: Volkswagen Environmental Mitigation Trust Fund Project

### **BUSINESS REFERENCES FORM**

List a minimum of three business references, including the following information:

- Business Name and Mailing address
- Contact Name and phone number
- Number of years doing business with
- Type of work performed

Please do not list any State Employee as a business reference. If you have held a State contract within the last 5 years, please list the contract(s).

Waste Management Delaware CNG Vehicle Deployment Project

#### General Information:

Applicant: Waste Management of Delaware, Inc. Mailing Address: 300 Harvey Drive City: Wilmington State: DE Zip: 19804 County: New Castle Daytime Phone: 609-434-5609 Alternate Phone: 609-352-8117 Email: jpryor1@wm.com Equipment Owner (if different from Applicant): N/A Mailing Address: N/A City: N/A State: N/A Zip: N/A County: N/A Daytime Phone: N/A Alternate Phone: N/A Email: N/A

The following table lists **eligible mitigation actions** pursuant to the Environmental Mitigation Trust. Please select the eligible mitigation action(s) for which you are applying (Check all that apply).

| Project Title: Waste Management Delaware CNG Vehicle Deployment Project |   |  |  |  |  |
|---|---|--|--|--|--|
| Type of Mitigation Action: Vehicle Replacement: Engine Repower:         |   |  |  |  |  |
| Type of Ent   | Type of Entity: Government: Non-government:   |  |  |  |  |
| Quantity  | Vehicle Replacement: 10 Engine Repower: N/A   |  |  |  |  |
| Check all that apply  | Eligible Mitigation Actions   |  |  |  |  |
|   | Class 8 Local Freight Trucks and Port Drayage Trucks (engine model year 2009-1992) repowered with any new diesel or alternate fueled engine or all-electric engine, or replaced with any new diesel or alternate fueled or all-electric vehicle, with the engine model year in which the eligible large trucks mitigation action occurs or newer.   |  |  |  |  |
|   | Class 4-8 school buses, shuttle buses, or transit buses (engine model year 2009 to 1992) repowered with any new diesel or alternate fueled or all-electric engine, or replaced with any new diesel or all-electric vehicle, with the engine model year in which the eligible bus mitigation action occurs or newer.                                 |  |  |  |  |
|   | Freight switchers that operate 1000 or more hours per year repowered with any new diesel or alternate fueled or all-electric freight switcher certified to meet the applicable EPA emissions.   |  |  |  |  |
|   | <b>Ferries/Tugs</b> - Unregulated, Tier 1 or Tier 2 marine engines repowered with Tier 3, Tier 4, alternate fueled, or all-electric engine, or upgraded with an EPA certified remanufacture system or an EPA verified engine upgrade.   |  |  |  |  |
|   | Ocean Going Vessels - Marine shore power systems or components of such systems that enable a compatible vessel's main and auxiliary engines to remain off while the vessel is at berth.   |  |  |  |  |
|   | Class 4-7 local freight trucks (engine model year 1992-2009) repowered with a new diesel, alternate fueled or all-electric engine, or replaced with any new diesel, alternate fueled or all-electric vehicle, with the engine model year in which the eligible medium trucks mitigation action occurs.  |  |  |  |  |
|   | <b>Airport Ground Support Equipment</b> - (Tier 0, Tier 1, or Tier 2 diesel powered) uncertified or certified to 3 g/bhp-hr. or higher emissions spark ignition engine powered airport ground support equipment repowered with an all-electric engine, or replaced with the same airport ground support equipment or newer in an all-electric form. |  |  |  |  |
|   | Forklifts and Port Cargo Handling Equipment - Forklifts with greater than 8000 pounds (lbs.) of lift capacity and port cargo handling equipment repowered with an all-electric engine, or replaced with the same equipment or newer in an all-electric form.  |  |  |  |  |

# **Mitigation Action Description**

Please provide a brief narrative describing how the project relates to Delaware's VW Environmental Mitigation Plan by reducing NOx emissions and how this project will benefit the State of Delaware. If additional space is needed please label (no more than one page) in your application "Title of Project, Mitigation Action Description."

# **Estimated NOx Reductions**

Please describe and calculate the NOx reductions achieved for this project using the Diesel Emission Quantifier (DEQ) on the EPA website. Estimate the NOx emission reductions from the project in terms of dollar per ton of NOx using the DEQ found at <a href="https://www.epa.gov/cleandiesel/diesel-emissions-guantifier-deq">https://www.epa.gov/cleandiesel/diesel-emissions-guantifier-deq</a>. Attach a separate summary calculation worksheet generated by the DEQ for each vehicle or piece of equipment and label pages in your application "Title of Project, Estimated NOx Reductions."

Please see attached narrative under "Waste Management Delaware CNG Vehicle Deployment Project, Estimated NOx Reductions"

Please identify the Inputs entered into the DEQ for Vehicles and/or Equipment proposed for replacement or repower under this application. Copy this form if more space is needed.

| Diesel Emission                     | Vehicles & equipment proposed for replacement or repower |                       |                        |                       |

# **Project Budget**

All projects require a cost share. Please be as detailed as possible when completing your budget. The applicant is responsible for detailing the proposed budget associated with the project. This includes "eligible mitigation actions" which includes the equipment necessary for the project while the "ineligible mitigation action expenditures" includes all administrative expenses related to the project.

Eligible Mitigation Actions are those projects that qualify for funding under this RFP. See Section 6 "Eligible Mitigation Actions" in the RFP for additional information. Copy this form if more space is needed.

|                  | Eligible Mitigation A                    | Actions |                   |               |                    |
|------------------|--|---------|-------------------|---------------|--------------------|

| Are you willing to accept funds from the DERA grant? If no, please explain below. | I Yes □ No   |

# **Proposed Project Location**

Define the project area. Please note the following:

- 1. if the project is sited near a major highway or transportation corridor, shipping route, or near a shipping logistics center,
- 2. is the project in an environmental justice (EJ) area or related location that receives a disparate

proportion of environmental impacts,

3. If the project avoids environmentally sensitive areas or areas containing critical habitats.

Indicate if the proposed project is located in a non-attainment and air quality maintenance areas. If additional space is needed please label page (no more than one) in your application "Title of Project, Proposed Project Location.

Please see attached narrative under "Waste Management Delaware CNG Vehicle Deployment Project, Proposed Project Location."

# **Project Timeline**

All projects must be completed within one (1) year of signing a final contract or MOU. The milestones included in this template are provided as guidance. Applicants may substitute other milestones that suit their purpose, please be as detailed as possible.

| Project Timeline                  |                            |  |  |
|-----------------------------------|----------------------------|--|--|

# Ability to be Replicated throughout the State

Provide a brief narrative to explain how the proposed project has the ability to be replicated throughout the state with other fleets or for public access. If additional space is needed please label (no more than one page) in your application "Title of Project, Replication.

| Please see attached narrative under Replication." | "Waste Management Delaware CNG Vehicle Deployment Project, |
|---|--|
|   |  |
|   |  |
|   |  |
|   |  |

#### Collaboration with Other Entities in the State

Provide a brief narrative to demonstrate that the project includes collaborative efforts between the applicant and project team. If additional space is needed please label the narrative (no more than one page) in your application "Title of Project, Collaboration."

| Please see attached narrative under Collaboration." | "Waste Management Delaware CNG Vehicle Deployr | nent Project, |
|---|--|---------------|
|   |  |               |
|   |  |               |
|   |  |               |
|   |  |               |

### **Economic Development**

Provide a brief narrative to explain how the project creates and/or retains local jobs for Delawareans and serves as an economic development engine for local Delaware based companies. If additional space is needed label the narrative (no more than one page) in your application "Title of Project, Economic Development."

Please see attached narrative under "Waste Management Delaware CNG Vehicle Deployment Project, Economic Development."

# **Attachments Checklist**

# Waste Management Delaware CNG Vehicle Deployment Project, Mitigation Action Description

Waste Management of Delaware, Inc. (WM) requests grant support from the Delaware Department of Natural Resources and Environmental Council (DNREC) in the amount of \$500,000 to purchase and deploy ten (10) near-zero-emission heavy-duty compressed natural gas (CNG) vehicles in Wilmington, Delaware and Laurel, Delaware. This project is a critical step for WM to provide alternative fuel waste collection services to its customer base throughout the state. The vehicles will be deployed at WM's new CNG facility in Laurel, which is currently under construction, and at WM's existing CNG facility in Wilmington. WM will operate the vehicles in its local refuse collection and recycling routes from each respective location, and in return for a grant award, WM will commit matching funds in excess of 80% of the entire project cost. The Delaware CNG Vehicle Deployment Project will serve as an important model for additional heavy-duty trucking companies not only to evaluate cost-effective and clean-burning natural gas vehicles in WM's fleet, but also to serve as an example for how to successfully implement advanced technology alternative fuel programs in large commercial and residential waste collection programs.

WM is pursuing an aggressive program to deploy CNG vehicles in Delaware, similar to the approach it has taken throughout the country in states including Pennsylvania, Colorado, and California. The project will serve as a method for WM to reduce vehicle emissions and improve air quality in New Castle and Sussex Counties, perfectly in alignment with the mission of WM and of the goals of DNREC's VW Beneficiary Mitigation Plan. By design, the project will accomplish the following:

- Measurable, Verifiable Reduction in NOx Emissions: Natural gas is a clean-burning alternative that reduces substantial smog-forming and cancer-causing emissions. On an annual basis, each vehicle purchased as a part of this project is expected to use a total of 8,500 Diesel Gallon Equivalents (DGE) of CNG. Annually, all ten vehicles combined are expected to displace 85,000 DGE of CNG total annually. This annual displacement of diesel will be a tremendous success story for the DNREC. At this rate of displacement, DNREC will reduce through the WM project more than 2.58 short tons of NOx, 0.14 short tons of PM, and 946.81 short tons of GHG emissions from its fleet annually.
- Project Budget: As mentioned above, WM will provide cost-share in excess of the 75% required for an alternative fuel vehicle replacement project, and WM's project will provide all of the benefits outlined in this application at a competitive, lifetime cost-effectiveness of \$30,238.52 per short ton of NOx reduced.
- Proposed Project Location: This project will have a tremendous positive impact on air quality for nonattainment areas in Delaware. WM's vehicles will primarily operate in New Castle and Sussex Counties, and in the 2008 evaluation of air pollutants, New Castle and Sussex Counties were both designated as 8-Hour Ozone nonattainment areas. The CNG technology proposed by WM represents a viable opportunity to significantly improve air quality, particularly with fleet vehicles that often run on diesel. The deployment of these CNG vehicles will replace the operation of diesel vehicles in WM's fleet, resulting in improved air quality in communities disproportionately affected by air pollution and more susceptible to health risks associated with diesel emissions.
- Project Timeline: This project is a critical step for WM to retire its engine model year (EMY) 1992-2009
  year diesel vehicles in order expand its natural gas-fueled waste collection services to its customer
  base in the Wilmington and Laurel areas. WM is eager and prepared to move forward with ordering
  and purchasing the new vehicles, upon receiving authorization to do so from the DNREC. WM will

complete the project within a year, as required by the guidelines, with an estimated completion date in the third quarter of 2020.

- Ability to be Replicated throughout the State: WM has years of experience and a proven track record of implementing CNG vehicle deployment projects. WM understands the level of detail required to ensure that projects are completed within the defined timeline and budget. WM has previously executed CNG deployments and looks forward to executing more based off of this project's success. Further, upon vehicle deployment, WM will provide the data to the extent requested by the DNREC to allow DNREC to leverage WM's experience. Creating case studies and completing other forms of outreach can help other fleets adopt WM's practices for further replication of CNG projects.
- Collaboration with Other Entities: Completing a CNG deployment project requires exhaustive
  collaboration between WM's internal leadership ships and external stakeholders including but not
  limited to its dealership network, utility partners, residential and commercial customers, state and
  local agencies, and members of the local community. By successfully navigating communications with
  each entity, WM has been able to commission over 130 CNG stations and deploy over 7,250 CNG
  units. WM is confident in its ability to work with its project partners to successfully deploy the ten
  vehicles included in this project.
- Economic Development: This project will directly benefit local companies and workers with expertise in vehicle servicing and advanced technology sales. As the natural gas market in Delaware continues to expand, there are a number of Delaware-based companies that will have to increase their own capacities to serve these growing demands. In particular, as more users are exposed to natural gas operations, the market for construction labor will increase, specifically for skilled construction and design firms familiar with natural gas station needs and maintenance bay retrofits for natural gas vehicle repairs. Similarly, vehicle technicians skilled in natural gas repairs will be in high demand, as will be the firms that employ them. OEM and dealer networks will also benefit as business develops.

# Waste Management Delaware CNG Vehicle Deployment Project, Estimated NOx Reductions

The Delaware CNG Vehicle Deployment Project will reduce 2.58 short tons of NOx, 0.14 short tons of PM, and 946.81 short tons of GHG emissions from annually. Over the project's lifetime, it will reduce 16.54 short tons of NOx, 0.8259 short tons of PM, and 6,189.15 short tons of GHG emission. The reduction of more than 16 short tons of NOx over the project life yields a cost-effectiveness of \$30,238 per short ton of NOx for WM's grant request of \$500,000 for ten new near-zero-emission CNG vehicles.

## Waste Management Delaware CNG Vehicle Deployment Project, Proposed Budget

#### **Project Costs**

Natural gas solid waste collection vehicles have significant emission reduction benefits, but are more expensive than their diesel counterparts. WM seeks to purchase a total of ten CNG vehicles for its refuse collection and recycling operations in Wilmington and Laurel. In order to partially defray the incremental or added cost of transitioning part of its refuse fleet to natural gas vehicles, WM is requesting \$500,000 total or \$50,000 per vehicle in grant funding support from the DNREC. The tables below display a breakdown of the vehicle costs by component. The prices displayed do not include taxes or freight.

For the Wilmington location, WM proposes to purchase three (3) Peterbilt roll-off units and two (2) Peterbilt residential front loader units. For the Laurel location, WM proposes to purchase two (2) Peterbilt roll-off units with the same specifications as the Wilmington location as well as two (2) Autocar commercial front loaders and one (1) Autocar residential front loader.

## Roll-Off Vehicle being ordered (three for Wilmington and two for Laurel)

#### **Total Project Costs**

WM will provide the match for the remaining vehicle purchase costs through its private capital. The total project cost, minimum cost-share required, and actual cost-shared provided are demonstrated in the table below:

| Total Project Cost    | \$2,595,729.33 |
|-----------------------|----------------|
| Required Cost-share   | \$1,946,797.00 |
| Actual Cost-Share     | \$2,095,729.33 |
| Actual Cost-Share (%) | 80.7%          |

# Waste Management Delaware CNG Vehicle Deployment Project, Proposed Project Location

WM's Delaware CNG Vehicle Deployment Project will occur at two of WM's sites within the state of Delaware in Wilmington and Laurel. The following tables include information about each site including its address, county, nearby corridors, EJ Screen demographic index and ozone percentiles, attainment status, and closest CNG fueling station(s). Both sites are near regional transportation corridors and are located in nonattainment areas. Given the nature of WM's operations in neighborhoods and commercial areas, the cleaner CNG vehicles will provide direct air quality benefits to the populations that live and work in WM's service areas, particularly for Wilmington, which is in the 99%ile on the EJ Demographic Index.

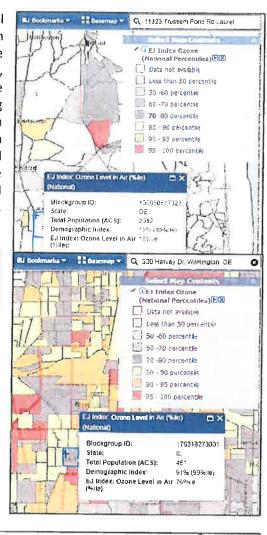

| Location                   | 11323 Trussum Pond Rd. Laurel,   |
|----------------------------|----------------------------------|
|                            | DE 19956 (Sussex County)         |

Delaware DNREC Contract No. NAT19001-VWEMTFP

## Waste Management Delaware CNG Vehicle Deployment Project, Replication

WM's plans to deploy CNG vehicles in Delaware go beyond the scope of this project. WM is committed to developing sustainable waste and recycling solutions, products, and services in its fleet of solid waste collection vehicles. WM began using natural gas refuse haulers in 1992, and today WM runs the largest fleet of natural gas refuse trucks in North America. WM's long-term vision is to use natural gas across all of its operations, and preferably renewable natural gas from its own landfills. Looking ahead, 90% of WM's entire corporate-wide truck purchases will be natural gas vehicles; an investment surpassing \$1 billion. The deployment of more than 7,250 clean burning NGVs is significant not only in magnitude, but, more importantly, it is proof of a deliberate and comprehensive effort to incorporate a cleaner burning vehicle fuel technology into an essential service for the communities and businesses in the state of Delaware. By switching to natural gas, WM is reducing dependence on imported petroleum and significantly improving the air quality in its areas of operations.

WM's Delaware CNG Vehicle Deployment Project will play a key role in strategically expanding the market for natural gas vehicles as well as the network of natural gas fueling infrastructure. WM's requested vehicles in Wilmington will fuel at the company's existing station, located just south of the Pennsylvania border and the heavily-populated Philadelphia metropolitan area. To support this deployment and future CNG vehicle deployments in Delaware, WM is constructing a brand-new CNG station at its Laurel location. WM can make fueling available to select, pre-approved, third-party fleets who request access to the station. Building a station in Laurel will complement the state's aggressive plans to increase the adoption of alternative fuels and reduce harmful emissions. The station will provide additional CNG fueling capacity for the region, at the intersection of several important local and regional goods movement pathways.

In order to provide long-term access to the greatest number of heavy-duty vehicles, it is critical that natural gas fueling infrastructure be available in the vicinity of major transportation corridors. In order for the fueling network in Delaware to become robust enough to support large numbers of natural gas vehicles, more CNG stations will be required. This project will serve as a critical first step toward initiating demand and creating momentum for natural gas fueling infrastructure in Delaware, and provide a tangible example of successful CNG operations in the state. With increased rates of technology adoption, economies of scale and associated production costs improve, setting examples for and providing encouragement to even more technology adopters. This applies in both the vehicle and station markets; with increased adoption, design processes become streamlined, component prices fall, workers and permitting officials become better educated about alternative fuel operations and project development needs, there is increased market competition overall, and prices continue to drop. Therefore, this CNG deployment project will improve the regional knowledge base and is part of the overall incentive that Delaware truly requires to see similar projects replicated throughout the state.

## Waste Management Delaware CNG Vehicle Deployment Project, Collaboration

WM has the expertise and experience to deploy, operate, and maintain the vehicles in this application, and it will do so through the collaborative support of several entities. WM's internal teams, vendors, and customers are key stakeholders in the project, and information about each is provided below.

Waste Management Key Personnel: The decision to apply for funding for Wilmington and Laurel's fleets was directed by Marty Tufte. Tufte is the corporate fleet director for WM, located in Phoenix, Arizona. Tufte has served for over 33 years in progressively responsible positions within the company and presently oversees the Natural Gas and Equipment Performance programs at the enterprise level. Tufte and his team have pioneered WM's use of CNG and LNG vehicles and fueling infrastructure, as well as use of renewable natural gas (RNG) in their CNG and LNG vehicles.

Outside of the corporate office, Jim Pryor and Richard St. John were central to the development of the application and will continue to play a critical role in the project's success. Pryor is the Area Fleet Director and St. John is the District Fleet Manager. They will be responsible for the timely deployment of the new vehicles and communications with drivers and technicians. Their roles involve the day to day functional management and providing collaborative assistance to local council and stakeholders.

Vendors: WM has a well-established network of dealerships and direct OEM support that enables it to keep up with the company's growth and ventures in the alternative fuel space. WM has already discussed the project with its vendors to secure documentation required for the grant's submittal. For this project, the preferred chassis providers are Peterbilt and Autocar; the preferred body providers are McNeilus, Galbreath, and Heil; and the preferred fuel system provider is Agility Fuel Solutions.

For years, Peterbilt has offered CNG and LNG options for its environmentally-conscious customers. As displayed in the references form (Attachment 6), WM's main point of contact for purchasing Peterbilt Trucks is Jesse Fullilove from Rush Truck Centers. Autocar remains both the oldest vehicle nameplate in America and the only truck manufacturer dedicated to severe-duty vocational applications. For Autocar, WM's main point of contact is Lisa Ringger, and she can be reached at Iringger@autocarturck.com. McNeilus has been a leading producer of CNG powered trucks since 2006. McNeilus produces route-ready, fully tested CNG vehicle systems directly from its factory off its moving assembly line. WM's main point of contact at McNeilus is Michael Derr, and he can be reached at MDerr@mcneilusco.com. With an extensive line of quality mobile products for the waste industry, Galbreath offers products for the safe, reliable transport of waste and other products. WM's main point of contact at Galbreath is Steven Hartwick, and he can be reached at shartwick@wastequip.com. Lastly, Heil has been a leader in the refuse industry since 1901, offering durable and innovated body manufacturing services. For Heil, WM's point of contact is Jared Lauritsen, and he can be reached at jlauritsen@doversg.com.

Community: WM's customers are its first priority, and WM actively engages with the communities it operates in to educate them about natural gas and its benefits. WM has a long and consistent track record of conducting public outreach and educational campaigns to share the benefits of recycling throughout North America. In order to bring awareness to this project, WM can conduct outreach while simultaneously deploying the proposed units. WM would enjoy the opportunity to work directly with the DNREC around this effort, which could include advertising in local newspapers and radio, event sponsorships, and direct meetings with civic and business organizations.

# Waste Management Delaware CNG Vehicle Deployment Project, Economic Development

Today, shale gas and renewable natural gas are revolutionizing the economy of Mid-Atlantic States, with many new and existing businesses growing thanks to lower fuel prices and jobs in alternative fuel supply chain. CNG is a reliable, low-cost, low-emission, and locally-sourced alternative to highly-emitting diesel. In addition to reducing diesel emissions and fuel run-off into local rivers and waterways, this project will further demonstrate the demand for locally-produced gas, and create many lucrative green-collar jobs necessary to support the new vehicles and accompanying station.

There will be many CNG companies that will benefit from the proliferation of CNG vehicles and infrastructure in the state. The proliferation of the natural gas market in Delaware's neighboring state, Pennsylvania, will directly relate to the success of Delaware-based companies that are fully entrenched in the industry. Large numbers of vehicle-related jobs will be created in Delaware due to the deployment of the CNG vehicles proposed under the scope of this project. The jobs will include positions related to workforce training, service, parts manufacturing, delivery, and truck operation. Local maintenance and service-support jobs will be created in order to service and support the CNG trucks; special on-the-job training will be provided to fleet-maintenance personnel and fleet drivers so they will have the skills to maintain and service the low-emission natural gas engines and tanks, as well as to operate the trucks. WM's fleet drivers and maintenance personnel will also be trained to understand the operation of the on-board natural gas fuel tank and methane detection system so that they are well-prepared in the event of an accident or emergency situation.

The Delaware CNG Deployment Project is the ultimate example of a project that provides an efficient, proven, and necessary step in transitioning Delaware's commercial and residential waste hauling away from petroleum-based fuels to clean-burning natural gas. Natural gas allows the heavy-duty operational requirements and high-fuel demands of Delaware fleets to be met using a supply that is plentiful, sourced domestically, low-carbon, and that provides exceptional long-term cost savings. Therefore, deploying these CNG vehicles would provide enormous benefits to WM and the surrounding residential and commercial communities. This project in particular will have significant immediate and long-term economic impacts that will benefit both the local economies and the State of Delaware. WM will invest in vehicle maintenance and will also continue to invest in the cost of equipment, construction, site improvements, and contract labor required to develop new CNG stations to support its growing fleet. These investments will inject immediate capital into the local economies at both locations in Delaware. Thus, this project will also create ongoing opportunities for highly skilled green jobs necessary to support the advanced technology vehicle and station operations and Delaware's transition into a market-leading clean technology economy.

#### ATTACHMENT E

#### DERA Option

The State of Delaware FY2019 Clean Diesel Work plan is attached. The State of Delaware is seeking Volkswagen Environmental Mitigation Funds as a DERA-Option 10 cost share for the deployment of CNG replacement vehicles under the FY2019 work plan. The State of Delaware lists 10 Class 8 Local Freight Trucks to be replaced as compressed natural gas – a total of 4 units are to receive Volkswagen Environmental Mitigation funds and 6 units are to receive Diesel Emission Reduction Act grant funding.

#### **FISCAL YEAR 2019**

#### STATE CLEAN DIESEL GRANT PROGRAM

#### WORK PLAN AND BUDGET NARRATIVE - State of Delaware

\*\*\*

#### **SUMMARY PAGE**

Project Title: Solid Waste Collection Vehicles & School Bus & Excavator Replacements

**Project Manager and Contact Information** 

Organization Name: Department of Natural Resources and Environmental Control

Project Manager: Deanna M. Cuccinello

Mailing Address: 100 W. Water Street Dover, DE 19904

Phone: 302-739-9402

Fax: 302-739-3106

Email: Deanna.morozowich@delaware.gov

#### **Project Budget Overview:**

| 12   | FY 2019        |
|--|----------------|
| EPA Base Allocation  | \$315,793.00   |
| State or Territory Voluntary<br>Matching Funds (if applicable) | \$361,675.00   |
| EPA Match Incentive (Bonus) (if applicable)                    | \$157,897.00   |
| Mandatory Cost-Share   | \$2,782,381.00 |
| TOTAL Project Cost   | \$3,617,746.00 |
| Other Leveraged Funds  | 0;€:           |

#### **Project Period**

October 1, 2019 - September 30, 2021

#### **Summary Statement**

The FY2019 Diesel Emission Reduction Act grant funds will be used to replace:

- 10 older diesel solid waste collection vehicles around the state with Waste Management,
- 1 school bus with The Teen Warehouse as an electric school bus in Wilmington, and
- 1 excavator owned and operated by the Division of Fish and Wildlife for Department of Natural Resources and Environmental Control.

The equipment will be replaced with the mandatory project partner funds along with DERA or Volkswagen Environmental Mitigation Funds as the cost share.

Clean diesel project information can be found on the following page: http://www.dnrec.delaware.gov/Air/Pages/MobileSourcesLinks.aspx

\*\*\*\*

#### **SCOPE OF WORK**

The projects presented in the FY2019 work plan will be administered by the Delaware Department of Natural Resources and Environmental Control – Division of Air Quality staff and the following project partners: Waste Management, Inc., the Teens Warehouse, the Division of Fish & Wildlife. The purpose of these projects is to reduce diesel emissions in the State of Delaware through the replacement of 10 diesel solid waste collection vehicles as compressed natural gas (CNG), a diesel school bus as electric school bus, and a excavator replacement.

#### STATE/TERRITORY GOALS AND PRIORITIES:

The following narrative describes how the project:

- 1. Will maximize public health benefits;
- 2. Is the most cost-effective;
- 3. Is in areas with high population density, that are poor air quality areas (including nonattainment or maintenance of national ambient air quality standards for a criteria pollutant; Federal Class I areas; or areas with toxic air pollutant concerns);
- 4. Is in areas that receive a disproportionate quantity of air pollution from diesel fleets, including truck stops, ports, rail yards, terminals, and distribution centers or that use a community-based multi-stakeholder collaborative process to reduce toxic emissions;
- 5. Includes a certified engine configuration or verified technology that has a long expected useful life;
- 6. Maximizes the useful life of any certified engine configuration or verified technology used or funded by the eligible entity; and
- 7. Conserves diesel fuel.

Poor air quality is a critical issue in the region. For Delaware, New Castle and Sussex County are still in non-attainment for the ozone standard. However, the state has attained the standard for fine particulate pollution. The state's air quality monitors show clean data for the new annual fine particulate standard and the state is part of the PM Advance Program. New Castle County is an approved PM2.5 maintenance area. Diesel emission reduction projects are still important to support Delaware's efforts to maintain good air quality relative to particulate pollution.

Table 1 Statewide Emission Inventory (2014) below compares emissions (NOx, PM, SO2) of Non-Road Equipment with the entire Non-Road Sector (NR Equipment, Aircraft, Locomotives, and Commercial Marine Vessels).

| TABLE 1 STATEWIDE EMISSION INVENTORY (2014) |          |          |           |        |      |  |  |
|---|----------|----------|-----------|--------|------|--|--|
| STATEWIDE ANNUAL                            | VOC      | NOx      | PM2.5-PRI | SO2    | NH3  |  |  |
| NONROAD Equipment                           | 4,303.32 | 3,677.64 | 342.10    | 8.97   | 6.14 |  |  |
| Aircraft                                    | 375.41   | 756.87   | 53.61     | 72.38  | NA   |  |  |
| Commercial Marine Vessels                   | 107.72   | 2,795.64 | 79.99     | 466.74 | 0.82 |  |  |
| Locomotives                                 | 21.32    | 406.09   | 13.07     | 4.24   | 0.19 |  |  |
| Total                                       | 4,807.77 | 7,636.24 | 488.77    | 552.33 | 7.15 |  |  |

#### **VEHICLES AND TECHNOLOGIES:**

Waste Management, Inc. proposes to replace ten diesel on-road solid waste collection vehicles with ten near-zero-emission vehicles that operate on compressed natural gas (CNG). The existing waste collection vehicles are equipped with engines between model years 1992-2009. Waste Management Inc. will deploy the new vehicles in Wilmington (New Castle County) and Laurel (Sussex County) and operate them on local refuse collection and recycling routes. The project will directly support the Department's goals to improve air quality and reduce diesel emissions. The solid waste collection vehicles are noted in Table 2.

| _    | TABLE 2 – Waste Management Equipment to be Replaced in 2019. |              |         |                   |  |  |  |
|------|--|--------------|---------|-------------------|--|--|--|
| Fuel | Model Year   | Make         | Model   | VIN               |  |  |  |

Additionally, transportation providers in Delaware are seeking cleaner-burning alternatives to diesel and are motivated by saving fuel costs and reducing school children's exposure to cancer-

causing and smog forming pollution through the replacement of old school buses with new lower emission diesel and propane school buses. Transportation providers are committed to providing Delaware schools with reliable, innovative, and efficient green transportation solutions. The following is a list of the transportation providers and the buses that are being considered for replacement in FY2019:

• Teens Warehouse is a nonprofit activity center for children in the City of Wilmington. They are replacing 1 diesel bus with an electric school bus.

| TABLE 3 – Teens Warehouse Equipment to be Replaced in 2019. |  |  |  |  |  |  |  |
|---|--|--|--|--|--|--|--|
| Fuel  | Fuel Model Year Manufacturer Chassis VIN             |  |  |  |  |  |  |
| D   | D 2006 International International 4DRBUAFP76B983310 |  |  |  |  |  |  |

Finally, the Division of Fish and Wildlife would like to replace an aging excavator. The information of the excavator is provided below.

| TABLE 4 – Division of Fish and Wildlife to be Replaced in 2019. |            |                    |                |            |  |  |  |
|---|------------|--------------------|----------------|------------|--|--|--|

| D   | 2003       | Kobelco<br>SK160LC | 4D34-<br>TLUZA | YM03-U0626 |  |  |  |

#### **ROLES AND RESPONSIBILITIES:**

DERA and Volkswagen Environmental Mitigation funds will be used on a reimbursement basis. The Division of Air Quality will issue a contract to each project partner that requires each of them to administer the entire replacement project, purchase order, and invoice processing, as well as, overseeing the delivery of the new equipment and scrappage and destruction of the old. The contract will also provide a process by which the Department will release funds for the partial purchase of the replacement equipment. Any funds remaining from the FY2019 DERA grant will be returned to the EPA.

#### TIMELINE AND MILESTONES:

- October 2019 DERA award Granted
- November 2019 Contracts written between the Department of Natural Resources and Environmental Control and each project partner memorializing an agreement that requires each transportation provider to administer the purchase and replacement of each piece of equipment, as well as oversee the replacement and scrappage requirements. The contracts will provide a process by which the Department will release the funds to purchase and replace the equipment.
- February/August 2020– New equipment will be purchased.
- July/September 2020 Existing equipment will be scrapped and destroyed.
- September 2021 Each equipment owner/transportation provider will supply fuel usage data to the Department.

#### **DERA PROGRAMMATIC PRIORITIES:**

The solid waste collection vehicles, school bus replacement project, and excavator replacement project meets all the programmatic goals and priorities set forth under DERA. Diesel exhaust from solid waste collection vehicles, school buses, and excavators contain significant levels of fine particulate matter. Air pollution from diesel vehicles has health implications for everyone. A major reason for implementing these replacement projects is to reduce the impact that the diesel emitting sources have on air quality.

#### EPA'S STRATEGIC PLAN LINKAGE AND ANTICIPATED OUTCOMES/OUTPUTS:

The emission reductions for the projects were calculated using the Diesel Emission Quantifier on the EPA website. Table 4 Projected Emission Reductions provides the emissions reductions (in shorts tons) and cost effectiveness for the solid waste collection vehicles, school bus replacement, and the excavator replacement.

| TABLE 4 PROJECTED EMISSION REDUCTIONS |                 |                |                 |  |  |  |
|---------------------------------------|-----------------|----------------|-----------------|--|--|--|
|                                       | Solid Waste     |                |                 |  |  |  |
| Annual Emissions                      | Collection      | School Bus     | Excavator       |  |  |  |
| Reduced (tons/yr)                     | Vehicles        | (qty. 1)       | (qty. 1)        |  |  |  |

| HC                                    | \$19,321,323.57 | \$6,070,360.00 | \$18,418,487.00 |  |  |  |
| CO                                    | \$4,499,033.12  | \$1,646,214.00 | \$3,729,283.00  |  |  |  |

#### SUSTAINABILITY OF THE PROGRAM:

All equipment will be strictly maintained and serviced as needed. If the equipment fails to perform in accordance with the manufacturer's conditions, the equipment will be repaired or replaced under the warranty provisions.

The Division of Air Quality maintains a website for Mobile Sources which includes the status and progress of DERA projects. See

http://www.dnrec.delaware.gov/Air/Pages/MobileSourcesLinks.aspx.

<sup>\*</sup>Do not include Other Leveraged Funds on SF-424 or SF-424A

#### **Explanation of Budget Framework**

- Personnel No grant funds used.
- Fringe Benefits No grant funds used.
- Travel No grant funds used.
- Supplies No grant funds used.
- Equipment The following equipment will be purchased/replaced:

The Division of Fish and Wildlife will be replacing a 2003 Kobelco SK-160 excavator. The total cost of replacement is \$625,000. The DERA grant will cover 25% replacement cost and the Department of Natural Resources will cover 75% as indicated in Table 5.

| TABLE 5 -          | FY2019 EQUIPMENT | COSTS        |           |                                   |                    |              |
|--------------------|------------------|--------------|-----------|-----------------------------------|--------------------|--------------|
| Project<br>Partner | Identification   | EPA          | EPA Bonus | Volkswagen<br>Mitigation<br>Funds | Project<br>Partner | Total        |
| Fish & Wildlife    | Kobelco SK-160   | \$156,250.00 | (#)       | +                                 | \$468,750.00       | \$625,000.00 |

# Contractual - Identify each proposed contract and specify its purpose and estimated cost.

The Department will issue a contract to each project partner that requires each of them to administer the entire replacement project. The contract will also provide a process by which the Department will release funds for the replacement of equipment. The total cost of the solid waste collection units is \$2,595,729. DERA grant funds and Volkswagen Mitigation funds will be used to replace 19.26% (\$500,000.00) of the total costs of the replacement vehicles. The total cost of replacement for the electric school bus and the required infrastructure is \$394,875.00. The Teens Warehouse is to receive a 45% cost share using Volkswagen Mitigation Trust Funds (\$177,693.75) for their school bus replacement and infrastructure.

| Total   | · ·        | \$1,421.00 | <u></u>                           | •               | \$1,421.00 |  |  |

#### • Indirect Charges - No grant funds used.

#### Administrative Costs Expense Cap

No grant funds will be used towards Administrative Expenses.

#### **Matching Funds and Cost-Share Funds**

The DERA program is a reimbursement program. The Department will also provide Volkswagen Environmental Mitigation Funds that exceed the EPA base funding (\$316,019) as the state cost-share. Once all costs for a particular project are expended and itemized receipts, pictures, and certificates of destruction are received, the Department will reimburse each project partner for the appropriate cost-share. These funds are shown in the Itemized Project Budget and Explanation of Budget Framework above.

#### Funding Partnerships

The DERA program is a reimbursement program. DERA grant funds are only to be used toward equipment replacement costs for each project partner. The Department would like to avoid extensive subaward monitoring and management requirements.

#### **Other Leveraged Funds**

No other leveraged funds are identified.

#### I. BACKGROUND

On October 18, 2016, an initial Partial Consent Decree was finalized between the U.S. Justice Department, the Volkswagen (VW) Corporation, and its subsidiaries regarding the installation and use of emissions testing defeat devices in approximately 590,000 2.0 and 3.0 liter engine vehicles sold and operated in the United States beginning with model 2009 through 2014. A second partial settlement was approved for the 3.0 liter engine class of vehicles on May 17, 2017. Use of these defeat devices has increased air emissions of nitrogen oxide (NOx), resulting in adverse impacts to air quality and violating the federal Clean Air Act. NOx emissions contribute to the formation of ground-level ozone, which impairs lung function and cardiovascular health.

The Environmental Mitigation Trust Agreement for State Beneficiaries (Trust) dated October 2, 2017 has been established as part of the Partial Consent Decrees. Funds are to be used for environmental mitigation projects that reduce emissions of nitrogen oxides ("NOx") where the Subject Vehicles were, are, or will be operated. The Trust Agreement is intended to fully mitigate the total, lifetime excess NOx emissions from the Subject Vehicles where the Subject Vehicles were, are, or will be operated.

The State of Delaware has been allocated approximately \$9.6 million from the Environmental Mitigation Trust based on the number of affected vehicles in Delaware. Delaware applied for Beneficiary status on November 27, 2017 and officially became eligible to receive funds on January 29, 2018. Wilmington Trust, as the court appointed Trustee, holds all funds and will disburse the funds upon receiving a state submitted work plan and budget. The Trust establishes a process to administer and receive the funds, including the development of a mitigation plan, and the types of mitigation projects eligible for funding<sup>1</sup>.

<sup>&</sup>lt;sup>1</sup> Appendix D of the Partial Consent Decree MDL No. 2672 CRB (JSC)

In addition to projects that reduce NOx emissions, under the partial consent decree, states may allocate up to 15% of the funds towards zero emission vehicle fueling and charging infrastructure (i.e. Hydrogen fueling and electric vehicle charging stations).

#### II. OVERVIEW, OBJECTIVES AND FUNDING PRIORITIES

On behalf of the State of Delaware, the Department of Natural Resources & Environmental Control (DNREC) has developed this Proposed Environmental Mitigation Plan to provide the public with insight into the state's vision and overall approach to use the mitigation trust funds. The primary goal of the State of Delaware's mitigation plan is to improve and protect ambient air quality by implementing eligible mitigation projects that will achieve significant and sustained reductions in NO<sub>x</sub> emission exposures in the following:

- Areas with poor air quality;
- Areas with historical air quality issues; and
- Areas that receive a disproportionate quantity of air pollution from diesel vehicles.

In accordance with Appendix D of the Partial Consent Decree,<sup>2</sup> this Proposed Environmental Mitigation Plan specifically describes:

 The funding priorities established to guide the planning, solicitation, and project selection processes,

<sup>&</sup>lt;sup>2</sup> Section 4.1 Beneficiary Mitigation Plan, Appendix D of the Partial Consent Decree MDL No. 2672 CRB (JSC).

- The categories of eligible mitigation projects anticipated to be appropriate to achieve the stated goals and the assessment of the allocation of funds anticipated to be used for each type of eligible mitigation project,
- How the state may consider the potential beneficial impact of the selected eligible mitigation projects on air quality in areas that historically bear a disproportionate share of the air pollution burden, and
- The anticipated ranges of emission benefits that would be realized by implementation of the eligible mitigation projects identified in the Environmental Mitigation Plan.

In addition to the above listed Environmental Mitigation Plan components, DNREC will seek and consider public comments on the State of Delaware's Proposed Environmental Mitigation Plan, which will be included in the final plan as required by the Consent Decree<sup>3</sup>.

The State of Delaware has the discretion to adjust its objectives and specific spending plan when necessary to achieve the plan's goal; for that reason, this plan is a living document. The State of Delaware will provide updates of the mitigation plan to the Trustee and on DNREC's public webpage about Delaware's actions for meeting the requirements of the Partial Consent Decree and the Mitigation Trust, at:

#### http://www.dnrec.delaware.gov/air/Pages/VWMitigationPlan.aspx

This Proposed Environmental Mitigation Plan is not a solicitation for projects. As such, this plan does not include details on the competitive application.

<sup>&</sup>lt;sup>3</sup> https://www.epa.gov/enforcement/third-partial-and-30l-second-partial-and-20l-partial-and-amended-consent-decree

#### III. PHASED FUNDING APPROACH AND ELIGIBLE APPLICANTS

DNREC is proposing a three-phase plan for the State of Delaware's allocation of funding. A phased plan will allow the state to:

- Build transparency and involve the public in reviewing and revising the plan between phases;
- Learn which projects work best, and modify requests for proposals in subsequent phases to focus on the most effective projects;
- Allow the state to identify environmental justice areas; and
- Allow the state to adjust priorities and investments based on the newest and most up-to-date vehicle technology.

The first phase of funding will be the first step in achieving our goals for the program. The three phases of funding are:

- Phase 1: \$3,225,560.99 (2018-2024) DNREC proposes to replace old diesel school buses with new cleaner school buses over a six year period.
- Phase 2: \$361,374.75 (2019-2020) DNREC offered a competitive RFP for projects in all categories. Two projects were determined by eligibility criteria set forth in the plan. These projects are described in Phase 2.
- Phase 3: Up to \$6.0 million (2020-2021) DNREC will allocate 15% of the funds for electric vehicle supply equipment. Projects will consist of the replacement of five (5) government-owned dump trucks and a competitive RFP where applications will be accepted for projects in all categories as well as school

bus replacements with private transportations providers. Projects will be determined by the eligibility criteria set forth in the plan.

Delaware's allocation of Trust funds is \$9,676,682.97 (0.33% of the total \$2.9 billion in Trust funds made available to states and Tribes). DNREC has proposed that Trust funds will be requested and made available for mitigation projects. A detailed project timeline can be found in **Table 1**.

**Table 1 - Tentative Timeline of Events**

#### IV. SUMMARY OF THREE-PHASED SPENDING APPROACH

## Phase 1 - School Bus Replacement Program:

The Department has recommended that Phase 1 funding be used to replace diesel school buses with cleaner school buses. DNREC's 2014 Emissions Inventory has concluded that up to 72% of in-state NO<sub>x</sub> emissions can be attributed to the transportation sector. Delaware's emissions from heavy and medium duty vehicles (which include school buses) are becoming an increasingly larger source of overall mobile source emissions for nitrogen oxides (NO<sub>x</sub>), as shown in Figure 1.

Research shows NO<sub>x</sub> emissions will be reduced by 11 percent just by replacing a diesel school bus with a new propane school bus<sup>5</sup>.

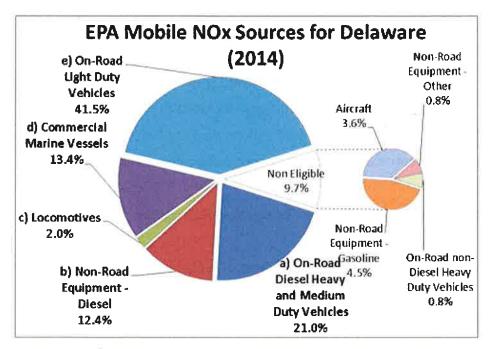

Figure 1 - Mobile NOx Sources for Delaware (Source 2014 NEI v1)

<sup>&</sup>lt;sup>5</sup> Propane education and Research Council - https://www.propanecouncil.org/

Studies have demonstrated that older, more polluting diesel school buses present significant health risks for the students who typically ride the bus. This includes the exacerbation of pre-existing pulmonary disorders such as asthma. Asthma is the most common long-term childhood disease, making newer and cleaner buses an urgent priority. Additionally, children are more susceptible to air pollution because their respiratory systems are still developing and they have faster breathing rates than do adults<sup>6</sup>.

Lastly, replacing school buses with buses that operate on cleaner burning fuel will assist the Department in reducing emissions in Delaware's environmental justice (EJ) areas. Environmental Justice is the act of equity among all races, ethnicities, income, and social classes of people and includes any census tract with a poverty level of 20% or higher and where 30% or more are considered minorities. The Department's mission relative to environmental justice ensures that no particular area receives disproportionate environmental impacts due to air pollution.

## Phase 1 - Program Requirements:

In Phase 1, the Department proposes and continues to use up to 1/3 of the allocated Trust funds or \$3,225,560.99 to provide funds to the Department of Education for the replacement of school buses with cleaner burning fuel. The Department is proposing a cost share of 30% for government-owned school bus replacements.

To be eligible, each school bus being replaced must be:

- 1) Scrapped and destroyed at the time of replacement;
- 2) Owned and operated in Delaware;
- 3) Equipped with a model year 1992 to 2009 engine;

<sup>&</sup>lt;sup>6</sup> American Lung Association – http://www.ala.org

- 4) Serve a public school district or a charter school in Delaware where at least 40% of the students are disparately impacted as shown in **Table 2 and Table 3**;
- 5) Each new bus purchased must be of equivalent size as the bus being replaced;
- 6) The bus must be replaced with a current model year or newer; and
- 7) The replaced school bus must be fueled by propane or clean diesel.

Table 2 - Percentage of Disparately Impacted Students by School District

| County         | School District        | Disparately Impacted (%) |

# **Phase 2 - Competitive RFP Program:**

In phase 2 of the plan, the Department proposed to provide up to 1/3 of the allocated Trust funds or \$3,225,560.99 in 2019 for the replacement of eligible mitigation

actions<sup>7</sup>. The Department will issue a competitive request for proposals (RFP) for projects that reduce nitrogen oxide (NOx) emissions from the transportation sector.

The following mitigation project types will be eligible for use of the VW Settlement Funds per the Trust Agreement found in Appendix D-2:

- 1.) Class 8 Local Freight Trucks and Port Drayage Trucks (Eligible Large Trucks)
- 2.) Class 4-8 School Bus, Shuttle Bus, or Transit Bus (Eligible Buses)
- 3.) Freight Switchers
- 4.) Ferries/Tugs
- 5.) Ocean Going Vessels (OGV) Shorepower
- 6.) Class 4-7 Local Freight Trucks (Medium Trucks)
- 7.) Airport Ground Support Equipment
- 8.) Forklifts and Port Cargo Handling Equipment

#### **Environmental Benefits:**

The retrofit, repower, or replacement of eligible vehicles and equipment may provide a wide range of emission benefits based on many variables, including the type of vehicle or engine replaced, the initial age of the engine, and the engine power rating.

<sup>&</sup>lt;sup>7</sup> The Department anticipates spending \$361,674.75 in Volkswagen Environmental Mitigation Trust Funds for Phase 2. The remaining \$2.8M will rollover to Phase 3 which will provide approximately \$6.0M to spend.

Each of the 8 project categories outlined in the VW Settlement Environmental Mitigation Plan will result in the following combined environmental benefits:

- Tons of pollution reduced or avoided over the lifetime of the zero emissions vehicle supply equipment, specifically, NO<sub>X</sub>, PM2.5, GHGs such as CO<sub>2</sub> and black carbon,
- Net reduction in gallons of diesel fuel and/or other fossil fuels used,
- Improved ambient air quality and human health in communities located in nonattainment areas, areas with historical air quality issues, or in areas that bear a disproportionate share of the air pollution burden, as well as benefits to the local economy, and the welfare of residents in such communities, and
- Reduced public exposure to diesel particulate matter, which the U.S. EPA
  has classified as a likely human carcinogen.

Additionally, based on current EPA exhaust emission standards for NOx:8

- Heavy duty highway vehicles may provide up to a 96% reduction in NOx emissions per vehicle, based on replacing a model year 1992 engine with a model year 2007 engine,
- Non-road equipment replacements, depending on the type of equipment and engine power rating, may provide between a 20% and 95% reduction in NOx emissions per engine,
- In locomotives, replacing the oldest (Tier 0) engine with the newest (Tier
   4) engine may provide up to an 89% NOx reduction per engine,

<sup>&</sup>lt;sup>8</sup> EPA exhaust emission standard data retrieved from: https://www.epa.gov/emission-standards-reference-guide.

- In commercial marine vessels, an upgrade or repower of a ferry or tug engine may provide up to an 80% NOx reduction for each vessel, and
- Shorepower projects may reduce all NOx exhaust emissions from many ocean-going vessels.

These anticipated ranges of emission benefits were used to inform the plan's funding priorities, categories of eligible mitigation projects, and funding allocation considerations for each category of eligible mitigation projects. It is important to note that the range of emission benefits mentioned above are for individual engines and actual NOx emissions reductions will vary based on the type of projects received for funding consideration and the eligible mitigation projects ultimately funded. However, in order to achieve the goal of the state mitigation plan, it is a priority to fund sizeable projects designed to achieve the greatest emission reduction for the dollar (i.e., capital cost effectiveness in dollars/ton).

The cost shares and requirements involved for each vehicle or equipment repower or replacement will be equivalent to the terms of the Diesel Emission Reduction (DERA)<sup>9</sup> grant. Cost shares identified in **Table 4** are based on the FY2017 State Clean Diesel Program Guide<sup>10</sup>.

<sup>&</sup>lt;sup>9</sup> The DERA program is a Congressionally-authorized project that enables the U.S. EPA to offer assistance for actions reducing diesel emissions. Thirty percent of the annual DERA funds are allocated to the DERA Clean Diesel State Grant Program. States and territories that match the base amount dollar per dollar receive an additional amount of EPA DERA funding to add to the grant (50% of the base amount). Trust funds can be used for states or territories non-federal match on a 1:1 basis.

<sup>&</sup>lt;sup>10</sup> 2017 FY2017 State Clean Diesel Program Guide - https://www.epa.gov/sites/production/files/2017-02/documents/fy17-state-program-guide-2017-02.pdf

Table 4 - Cost Shares for Eligible Mitigation Actions

|   |  | *(   |                             |                             |

| Eligible<br>Mitigation<br>Action                  | Activity  | Vehicle and Equipment Eligibility (Engine Model Year or Tier) | VW<br>Funding | Cost<br>Share<br>Required |
|---|---|---|---------------|---------------------------|
|   | new all-electric freight switcher   |   |               |                           |
|   | Engine replacement with new Tier 3 or 4 diesel or alternate fueled engine | Pre-Tier 3  | 40%           | 60%                       |
| Ferries/Tugs                                      | Engine replacement with new all-electric engine                           | Pre-Tier 3  | 60%           | 40%                       |
|   | Certified Remanufacture System or Verified Engine Upgrade                 | Pre-Tier 3  | 40%           | 60%                       |
| Ocean Going<br>Vessels                            | Costs associated with shore-<br>side system                               | n/a   | 25%           | 75%                       |
| Airport Ground<br>Support<br>Equipment            | Engine replacement with new all-electric engine                           | Pre-Tier 3  | 60%           | 40%                       |
| Forklifts and Port<br>Cargo Handling<br>Equipment | Equipment replacement with new all-electric equipment                     | 8000+ lbs lift capacity                                       | 45%           | 55%                       |

Non-government and government entities are eligible to apply for funding to implement mitigation projects. Project funding will be awarded through a competitive process in accordance with Delaware's procurement laws<sup>11</sup>. Any unspent funds remaining at the end of Phase 2 will be rolled into Phase 3.

Diesel Emission Reduction Act (DERA):

The Department may leverage the projects in all phases in order to received additional Diesel Emission Reduction Act (DERA) grant funding. Any source type applying for grant funding will be subject to the requirements of the DERA State Clean

<sup>&</sup>lt;sup>11</sup> Delaware Procurement laws can be found at <a href="http://mymarketplace.delaware.gov/">http://mymarketplace.delaware.gov/</a>

Diesel Grant Program, including but not limited to general eligibility, project evaluation criteria, eligible project and administrative expenditures, cost-share, and funding restrictions.

The projects submitted via the RFP will be reviewed by a Department established Project Selection Committee. The committee will select and rank project applications based on a set "Project Scoring Criteria/Matrix" developed by the Department as shown in **Table 5** expressly for this purpose.

#### Phase 2 Program Requirements:

To be eligible, each vehicle or piece of equipment to be repowered or replaced must be:

- 1) Scrapped and destroyed at the time of replacement;
- 2) Owned and operated in Delaware;
- 3) Equipped with an eligible model year engine or Tier level;
- 4) Serve an environmental justice area;
- 5) Each new vehicle or engine purchased must be of appropriate /equivalent size as the vehicle or engine being replaced; and
- 6) The new vehicle must be replaced with a current model year or newer.

# Volkswagen RFP Scoring Matrix:

The Department has developed a project RFP scoring criteria/matrix. Each application submitted will be scored based on the factors outlined in the matrix in **Table**5. The number of projects that are selected for funding in phases 2 and 3 will depend on the applications received and interest by vehicle and equipment owners.

The following criteria will be used by the grant Review Committee to review and score applications received for the VW Mitigation Funds:

Table 5 - VW Settlement RFP Award Criteria

| Project Award Criteria   | Points   | Points  | Comments |
|--|----------|---------|----------|
|  | Possible | Awarded |          |
| Measurable, verifiable reduction in NOx emissions  - The project will produce a net reduction in NOx emissions in the State and result in a measurable, verifiable reduction in NOx per ton of emissions using the Diesel Emission Quantifier.  - Projects must meets eligibility requirements of Appendix D-2 of the VW Mitigation Plan   | 30       |         |          |
| Project Budget -The proposed budget is thorough, robust, realistic and cost effective The applicant must show a detailed budget with all cost shares explained.  | 15       |         |          |
| Proposed Project Location  The project is sited near a major highway or transportation corridor, shipping route, or near a shipping logistics center.  This project will address an environmental justice (EJ) area or related location that receives a disparate proportion of environmental impacts.  The project avoids environmentally sensitive areas or areas containing critical habitats.  Priority will be given to projects in non-attainment and air quality maintenance areas. | 15       |         |          |
| Project Timeline The proposed project must define when the project will commence and will end.   | 15       |         |          |

| Project Award Criteria                    | Points   | Points  | Comments |
|---|----------|---------|----------|
|   | Possible | Awarded |          |
| Ability to be Replicated throughout       |          |         |          |
| the State                                 |          |         | 9        |
| - The proposed project has the ability    | 10       |         |          |
| to be replicated throughout the state     |          |         |          |
| with other fleets or for public access.   |          |         |          |
| Collaboration with other Entities in      |          |         |          |
| the State                                 |          |         |          |
| - The project includes collaborative      |          |         |          |
| efforts between the applicant and         | 10       |         |          |
| project team (an anchor fleet or fleets,  |          |         |          |
| utility/fuel provider, vehicle dealer, or |          |         | 5        |
| manufacturer).                            |          |         |          |
| Economic Development                      |          |         |          |
| - The project creates and/or retains      |          |         |          |
| local jobs for Delawareans.               | 5        |         |          |
| - The project serves as an economic       | 5        |         |          |
| development engine for local              |          |         | 3        |
| Delaware based companies.                 |          |         |          |
| Total Points                              | 100      |         |          |

## Status Update of Phase 2 Program:

The Department selected two projects for replacement in 2020 under the Request for Proposal NAT19001-VWEMTFP. The Department is partnering with Waste Management, Inc. of Delaware in the replacement of ten (10) solid waste collection units as compressed natural gas (CNG) for the first project. The waste collection units will serve in New Castle and Sussex County, which are both designated as non-attainment areas. This project will use combined Diesel Emission Reduction Act (DERA) grant funds (\$316,019.00) and Volkswagen Mitigation Trust Funds (\$183,981.00).

For the second project, the Department is partnering with The Teens Warehouse, Inc. to replace one diesel school bus with new, electric school bus with associated electric vehicle supply equipment. The electric bus will serve New Castle County. Funds shall cover up to 45% of the cost of an eligible replacement vehicle powered by an engine certified to the 2019 model year or newer standards and the charging infrastructure associated with the new all-electric vehicle. The project will cost

\$177,693.75. As previously described, any funds remaining from Phase 2 will rollover to Phase 3. The Department estimates that \$2.8M will remain in Phase 2 so Phase 3 will have approximately \$6.0M available.

### Phase 3 - A Hybrid Program:

During Phase 3 of this funding, DNREC's Division of Climate, Coastal, and Energy will receive 15% (\$1.45M) of the Trust funds to administer a competitive grant program for the deployment of electric vehicle supply equipment (EVSE). Specifically, these funds will be utilized to incentivize the construction and operation of DC Fast Charging stations in the state to provide residents and travelers with convenient and consistent access to electric vehicle supply equipment. Grant funding will be provided for the material costs of publically available DC Fast Charging Stations installed within the state of Delaware. Eligible entities for grant funding will include Delaware-based businesses, not-for-profit organizations, government entities, and educational institutions. Project proposals will be submitted through competitive Request for Proposal process and will be evaluated based on criteria in the categories of:

- Estimated greenhouse gas reductions
- Proximity to Alternative Fuel Corridors and proximity to high traffic volume routes
- Accessibility regarding payment options
- Thoroughness of the Operations and Maintenance Plan
- Overall project budget and cost effectiveness

In addition to the funding for electric vehicle charging stations, the Department will allocate up to \$600,000 to replace five (5) Class 8 government-owned dump trucks with the Division of Fish and Wildlife. These vehicles will be used around the state. The Department will also release a competitive request for proposals (RFP) for projects that reduce nitrogen oxide (NOx) emissions from the transportation sector. In the Competitive RFP, the Department will pursue the following:

- School bus replacements with the privately-owned school bus contractors. In Delaware, private school bus contractors provide 2/3 of transportation services to Delaware schools. The Department will allocate up to \$2 million in the replacement of propane or clean diesel school buses. The contractors are eligible for a 25% cost share and school bus replacements must match the criteria established in Phase 1 Program Requirements and Phase 2 Competitive RFP Program.
- All other eligible mitigation actions. The remaining Trust funds, up to \$2 million, will be used for the replacement of eligible mitigation actions listed in Phase 2 Competitive RFP Program.
